classified into three types: Application Commands, Toolbar Commands and Pen Commands. Application Commands are the commands that are used to change the application's operation. These include opening a drawing and saving a drawing. Toolbar Commands are used to perform functions such as selecting, zooming and moving a drawing. Pen Commands are used to perform basic functions like creating, drawing and editing. The command line also contains a 'Help' menu, which provides a search facility for the commands or keywords associated with a command. The drawing area displays the current drawing. The drawing area is where the user works and commands are performed on objects. There are three types of objects: geometric objects, data objects, and annotations.
