If you have any additional questions, please see More than a year ago by Brad W. - Intel PROset for Wireless Elegant and Simple I recently purchased an Intel Wireless 5150 Mini PCI Express WLAN Adapter card to replace my aging 6100 card. I was impressed with the features of the 5150, even though my application was not a high-bandwidth one. The features I liked most included: very compact size, operation of all 8 external antennas simultaneously, robust circuitry, and very low power consumption. The 5150 has one major drawback. It only uses one of the 2 internal antennas at a time. That is, it has a 3dB gain over one external antenna and a -6dB loss over the other. Unfortunately, the included wireless network drivers are optimized for only one antenna, so if you use the one internal antenna, the 50% connection loss makes your connection very difficult to maintain. For this reason, I recently purchased the IEEE 802.11n compliant iwpriv toolkit from This is a command-line toolkit designed for people who prefer to operate from the command line. It's very intuitive, and the developers work very hard to make it easy to use. When the iwpriv toolkit is installed, you have the ability to control the wireless adapter through a single command: iwconfig. Not only does it allow you to enable or disable each of the 8 external antennas, but it also allows you to change the default antenna that is used. If you have multiple users connecting to your 802.11n network, you can configure the iwpriv toolkit to use a single default antenna for all users. The developers offer one example of how to accomplish this: I hope you find

"I am not sure it will be possible for them to say no to this text," she said, referring to the six permanent members. "They will have to do it in a very short amount of time," she said. "They will have to meet all the conditions." It was reported that the USA, China and Russia have also expressed reservations about the text, as well as India and Japan, which together account for about a third of the 193-member organisation. France, Italy, Spain and the United Kingdom also voted against the draft, according to Al Jazeera. The resolution would impose tighter monitoring on a practice that has been widely criticised for undermining cultural and artistic diversity on the Internet. "It is the big thorn in the side of the Internet community," said Lilian Waingarten, co-founder of La Quadrature du Net, a French anti-censorship group. "After this resolution, the control will become very heavy," she said. "The terms on freedom of expression and the right to information will be very, very tight 77a5ca646e
